-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4, 5, 11, 12, 14 and 15 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent no. 4,852,826 to Sato.

Sato, as seen in Figure 1, discloses a sealing structure for a fishing reel having a reel unit, a spool shaft 4 rotatively fitted in the reel unit, and a spool 5 supported rotatively on the spool shaft 4, the sealing structure comprising: a first member 84a non-rotatably mounted on the spool shaft 4; a second member 9 non-rotatably attached to the spool 5 and having an inner peripheral surface disposed about an outer peripheral surface of the first member 84a, the second member 9 being rotatable relative to the first member 84a, the inner peripheral surface having a small-diameter contact face (surface contacting element 10) and large-diameter relief face (outer annular surface of surface contacting element 10), the smaller-diameter contact face being closer to the spool than the large-diameter relief face is; and a seal member 10 for sealing a clearance between the first member and the second member, and having a cylindrical portion made of an elastic substance and mountable on a sealing portion formed integrally on an outer circumferential surface of the cylindrical portion and tapering toward the inner peripheral surface

of the second member such that a distal edge of the sealing portion can contact the small-diameter contact face of the second member.

Allowable Subject Matter

Claims 3, 6-8, 13 and 16-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
